

To the Doctor

The card holder's work may expose him/her to the danger of leptospirosis (either *L. icterohaemorrhagiae* or *L. hardjo*). Early diagnosis and treatment are vital in Weil's disease as jaundice is often absent in the early stages. The illness in *L. hardjo* may also be greatly shortened by appropriate antibiotic treatment. (Your local Public Health Laboratory Service or hospital consultant microbiologist should be able to offer advice and serological testing.)
